A black Harman International MT-60-91 audio mixer is shown from a top-down perspective. The device has two main channels, each with a large input knob, a gain knob, and a frequency response section with 'HIGH', 'MID', and 'LOW' sliders. The right channel also includes a 'REVERB' control. At the top, there are several input ports, including XLR and 1/4" jacks, and a 'MONITOR' output. A small display with green and red LEDs is visible. The mixer is placed on a light blue surface, and a wooden ruler is positioned horizontally below it for scale. The ruler shows measurements in inches and centimeters.
